DDT degradation by bacteria from activated sludge ...
These findings are in line with earlier reports wherein the
biodegradative ability of the sludge adapted to the parent
compound or an analog has been shown to be effective in
oxidation of compounds closely related to them in
structure (Malaney, 1960). The pseu- domonas sp. isolated
by diphenylethan enriched sludge similarly could utilise
only certain analogs of DDT, and not the dichloro

Abstract. Endophytic bacteria play a key role in the biocontrol of phytopathogenic microorganisms. In this study, genotypic diversity was analyzed via repetitive element PCR (rep-PCR) of endophytic isolates of the phylum Actinobacteria that were previously collected from leaves of cultivars of common bean (*Phaseolus vulgaris*).
