The concrete test hammer is used to evaluate the surface hardness of hardened concrete in order to evaluate the strength in various parts of the structure.

Rebound Hammer Test - Civil Engineering

Rebound hammer test is done to find out the compressive strength of concrete by using rebound hammer as per IS: 13311 (Part 2) 1992. The underlying principle of the rebound hammer test is, The rebound of an elastic mass depends on the hardness of the surface against which its mass strikes. When the plunger of the rebound hammer is pressed against the surface of the concrete, the pring Concrete Test Hammers - M&L Testing Equipment SilverSchmidt Concrete Test Hammer Non-destructive strength testing of concrete has a whole new look thanks to the new SilverSchmidt Test Hammer. The new SilverSchmidt redefines concrete strength testing with the use of what is called a "Q" value as opposed to the classic use of an "R" value.

The concrete rebound hammer is an instrument which is easy to use, for quick and approximate measurement of the resistance to pressure of manufactured concrete products.

The principles on which it works are based on the rebound impact of a hammer on a piston which rests against the surface of the concrete under test : the greater resistance of the concrete, the greater the rebound impact.
