Cortical vs. Subcortical Strokes

A stroke may affect cortical regions of the cerebral cortex, including the frontal, parietal, temporal and occipital lobes, or structures subcortically, below the cortex, including the internal capsule, thalamus, basal ganglia, brainstem and cerebellum. This differentiation is clinically important

What does 'mild cortical atrophy' mean in MRI report of ...

Everyone loses their cortex as they age, the amount of loss and at what age it starts is a little different for everyone, but in general, normal age-related cortical volume loss/atrophy should affect the cortex in all lobes equally.

Long-term memory in the cortex | Max-Planck-Gesellschaft

The new study is a game changer since it strongly suggests that the motor cortical circuits itself, and not the hippocampus, is used as memory storage. Memories (red) for associating two different sensations are formed in the cortex (tone in blue and touch in yellow).

Higher Cortical Functions - PubMed Central (PMC)

Memory is affected by attention and emotional arousal, and anatomically there is close spatial proximity between the hippocampus (particularly significant for memory function) and the amygdala (significant for emotional arousal). The memory function of the hippocampus is affected by the amygdala, and persons who have been shown emotional pictures later can remember the emotional details

Cerebral cortex - Wikipedia

The cerebral cortex is the outer layer of neural tissue of the cerebrum of the brain, in humans and other mammals. It is separated into two cortices, by the longitudinal fissure that divides the cerebrum into the left and right cerebral hemispheres.

Prefrontal cortex - Wikipedia

The medial prefrontal cortex (mPFC) is composed of granular cortical areas (medial areas BA9 and BA10) and agranular regions (areas 24, 25, and 32) which encompasses the anterior cingulate cortex (area 24), infralimbic cortex (area 25), and prelimbic cortex (area 32).
