[Hemochromatosis - Causes, Symptoms, Treatment, Diagnosis ...](#)

Hemochromatosis is primarily an inherited (genetic) condition that allows too much iron to be absorbed and stored throughout the body. It's one of the most common genetic disorders in Canada.

[Hemochromatosis.org - An Education Website for ...](#)

What is Hemochromatosis? Hemochromatosis is an iron disorder in which the body simply loads too much iron. This action is genetic and the excess iron, if left untreated, can damage joints, organs, and eventually be fatal.

[Hemochromatosis - Symptoms and causes - Mayo Clinic](#)

Hereditary hemochromatosis (he-moe-kroe-muh-TOE-sis) causes your body to absorb too much iron from the food you eat. Excess iron is stored in your organs, especially your liver, heart and pancreas.

[Hemochromatosis | NIDDK](#)

What is hemochromatosis? Hemochromatosis is the most common form of iron overload disease. Too much iron in the body causes hemochromatosis. Iron is important because it is part of hemoglobin, a molecule in the blood that transports oxygen from the lungs to all body tissues.

[Hemochromatosis - Canadian Liver Foundation](#)

Hemochromatosis is an inherited disease in which the body absorbs too much iron from the diet.

Hemochromatosis is one of the most common genetic diseases in Canada affecting 1 in 327 Canadians.

[Hemochromatosis: Types, Risk Factors, and Causes](#)

Hemochromatosis is a condition caused by the over-absorption of iron from foods that you consume, leading to an excessive concentration of iron in your blood.

[Hemochromatosis - Types, Symptoms, Causes, Diagnosis ...](#)

Hemochromatosis is a disorder where too much iron builds up in your body. Sometimes it's called iron overload.

There are two types of this condition – primary and secondary. Primary

[Symptoms | Canadian Hemochromatosis Society](#)

Symptoms. This page is also available as a printable PDF: Symptoms. Early Symptoms Often Go Unnoticed. In spite of being the most common genetic disorder among persons of Northern European descent, hemochromatosis remains relatively unknown.

[Hereditary Hemochromatosis: Symptoms, Diagnosis, Diet ...](#)

Hereditary hemochromatosis is an inherited (genetic) disorder in which there is excessive accumulation of iron

in the body (iron overload). It is a common genetic disorder among Caucasians in the United States, affecting approximately 1 million people in the United States.

#### **Iron overload - Wikipedia**

Iron overload indicates accumulation of iron in the body from any cause. The most important causes are hereditary haemochromatosis (HHC), a genetic disorder, and transfusional iron overload, which can result from repeated blood transfusions.

#### **Hemochromatosis Diet- What to Eat, and What Not to Eat ...**

The healthiest hemochromatosis diet should lower foods high in iron and be delicious, nutritious, and fun! There are many reasons why a diet helpful for hemochromatosis should not be too restrictive.
