Relative humidity and dew point both give us an idea of the amount of moisture in the atmosphere; however only dew point is a true measurement of the atmospheric moisture. Relative humidity is

[Dew Point Calculator - Find The Dew Point - Omni](#)
Dew point and relative humidity are not the same, but they are closely related: the higher relative humidity is, the dew point is closer to the current air temperature. In a special case, when the air is maximally saturated with water (the relative humidity is 100%), the dew point is equal to the current temperature.

[Dew Point vs. Humidity - National Weather Service](#)
The dew point is the temperature the air needs to be cooled to (at constant pressure) in order to achieve a relative humidity (RH) of 100%. At this point the air cannot hold anymore water in the gas form.

[What Is Dew Point? | Relative Humidity - Live Science](#)
The relative humidity is 100 percent when the dew point and the temperature are the same. If the temperature drops any further, condensation will result, and liquid water will begin to form.

[Difference Between Dew Point and Humidity - Pediaa.Com](#)

Dew point is the temperature at which water vapour in a given sample of air at atmospheric pressure reaches maximum saturation (100% relative humidity). At this temperature or below, the water vapour can condense to form dew (and hence the name dew point).
