[Ovarian neoplasm | definition of Ovarian neoplasm by](#)

Ovarian cancer is cancer of the ovaries, the egg-releasing and hormone-producing organs of the female reproductive tract. Cancerous, or malignant, cells divide and multiply in an abnormal fashion.

[Ovarian cancer - Wikipedia](#)

Ovarian cancer is a cancer that forms in or on an ovary. It results in abnormal cells that have the ability to invade or spread to other parts of the body. When this process begins, there may be no or only vague symptoms. Symptoms become more noticeable as the cancer progresses.

[The Radiology Assistant : Ovarian Cysts - Common lesions](#)

For epithelial tumors - by far the most common group of malignant ovarian tumors - even after surgery, the exact tumor subtype is much less important for the prognosis than factors such as FIGO-stage, tumor differentiation grade, and how successful surgery was in removing all of the disease.

[Ovarian Tumors - MedicineNet](#)

Ovarian cancer is a relatively uncommon type of cancer that arises from different types of cells within the ovary, an egg-producing female reproductive organ.

[Types & Stages - National Ovarian Cancer Coalition](#)

Epithelial Tumors - Epithelial ovarian tumors develop from the cells that cover the outer surface of the ovary. Most epithelial ovarian tumors are benign (noncancerous). There are several types of benign epithelial tumors, including serous adenomas, mucinous adenomas, and Brenner tumors. Cancerous epithelial tumors are carcinomas - meaning they begin in the tissue that lines the ovaries. These

[Common Causes of Ovarian Enlargement: Ovarian](#)

### neoplasms
