Respiratory physiotherapists - ERS

Physiotherapy typically commences with a comprehensive assessment of the patient's respiratory function, breathing pattern, respiratory muscle function and exercise capacity. Assessment of skeletal muscle function is particularly important, as this forms a major barrier to normal functioning in many respiratory patients. Based on this information, an evidence-based therapy plan is developed.

Physiotherapy in Respiratory Care | Request PDF

The role of respiratory physical therapy and pulmonary rehabilitation is clearly defined in the upper abdominal surgery and in other thoracic surgeries, such as lung volume reduction, but in the
