[Falsehoods Programmers Believe About Names With Examples](#) January 8, 2018 January 22, 2018 tony rogers 4 Comments In 2010, Patrick McKenzie wrote the now-famous blog [Falsehoods Programmers Believe About Names](#), in which he listed 40 things that were not universally true about names.

[Kalzumeus: Falsehoods Programmers Believe About Names](#)

[Falsehoods Programmers Believe About Names](#). John Graham-Cumming wrote an article today complaining about how a computer system he was working with described his last name as having invalid characters.

[Falsehoods Programmers Believe About Names | Hacker News](#)

Requiring everybody to have a simple ASCII name would be convenient for programmers, but would be a big hassle for people whose names don't meet those requirements. "Be in the Basic Multilingual Plane or get a nickname" is a policy that, I think, provides a reasonable balance. Of course, supporting all of unicode isn't really that much harder, so I think that's a better balance.
