[Sizing PWM Solar Charge Controllers](#) | alE
Voltage and amperage (or current) are the parameters we use in solar charge controller sizing. The solar controller must be capable of accepting the voltage and current produced by the DC source (usually solar panels) and delivering the proper voltage and current to the batteries. This situation might make you think that the DC source, charge controller and batteries must all share a common Solar Charge Controllers - MPPT & PWM Controllers | alE

Solar charge controllers are specified by both amperage and voltage. You will need one that can support the voltage of your solar panel array, and then output to the battery bank's voltage (usually 12, 24 or 48VDC).

There are 1,737 solar charge controller volts suppliers, mainly located in Asia. The top supplying countries are China (Mainland), Pakistan, and United States, which supply 99%, 1%, and 1% of solar charge controller volts respectively. Solar charge controller volts products are most popular in Africa, Western Europe, and North America. You can ensure product safety by selecting from certified suppliers, including 743 with ISO9001, 320 with Other, and 122 with ISO14001 certification.

For example, with a PWM charge controller you may have a solar panel operating at 18.0V and 5.0A, feeding 5.0A in to your battery bank. If your battery bank is at 13.0V you are only getting 65W (13.0V x 5.0A = 65W) from the panel. With an MPPT charge controller on that same panel you will be able to use that extra voltage (18.0V - 13.0V = 5.0V) and turn it into more current. Your charging

For 12V system, measure the input voltage from solar panel with multimeter (terminal 1, 2 of controller), it is normal if the voltage of solar panel more than battery voltage 0.5-6V. Generally, the higher input voltage, the better charge efficiency. For 24v and 48V system, the input voltage will be much more higher than battery voltage

Choosing the Correct Charge Controller | CivicSolar
Solar charge controllers are rated and sized by the solar
module array current and system voltage. Most common
are 12, 24, and 48-volt controllers. Amperage ratings
normally run from 1 amp to 80 amps, voltages from 6-60V
volts.

**REDUCING THE VOLTAGE OF YOUR SOLAR
PANEL.** Without a controller between a solar panel and a
battery, the panel would overcharge the battery by
generating too much voltage for the battery to process,
seriously damaging the battery. Overcharging a battery
could result in the battery exploding! 2. **MONITORING
THE VOLTAGE OF YOUR BATTERY .** The controller
detects when the battery's voltage is too
