Geomagnetic field: Geomagnetic field, magnetic field associated with the Earth. It primarily is dipolar (i.e., it has two poles, these being the north and south magnetic poles) on the Earth's surface. Away from the surface the dipole becomes distorted. In the 1830s the German mathematician and astronomer Carl

[Earth's magnetic field - Wikipedia](#)

Earth's magnetic field, also known as the geomagnetic field, is the magnetic field that extends from the Earth's interior out into space, where it meets the solar wind, a stream of charged particles emanating from the Sun.

[Geomagnetism - Natural Resources Canada](#)

Geomagnetism The Earth's magnetic field (or geomagnetic field) is an ever-changing phenomenon that influences human activity and the natural world in a myriad of ways.

The geomagnetic field changes from place to place, and on time scales ranging from seconds to decades to eons.

[Why Earth's Magnetic Field Might Not Flip After All](#)

A gradual weakening in Earth's geomagnetic field has raised concerns that the field could flip, reversing magnetic north and south. But now, new research suggests the field has been in a similar

The geomagnetic field reverses in an aperiodic fashion, with intervals of constant polarity having durations ranging from 20 ky to 50 My. An ideal sampling scheme would be one that is designed to monitor the geomagnetic

field every ~5000 years. This is often impractical or impossible due to the type of rock being sampled. In sampling marine sedimentary cores, it is common practice to remove

The Earth's geomagnetic field is a combination of several magnetic fields generated by various sources superimposing on each other. More than 90% of the field is generated by the movement of conducting material inside the Earth's core, which is often referred to as the Main Field. Other important sources of the geomagnetic field include electric current flowing in the ionized upper atmosphere
