[What are Web Services - Current Affairs 2018, Apache](#)
...

Different books and different organizations provide different definitions to Web Services. Some of them are listed here. A web service is any piece of software that makes itself available over the internet and uses a standardized XML messaging system.

[Web Services Explained - Service Architecture](#)

The Web Services Description Language (WSDL) forms the basis for the original Web Services specification. The following figure illustrates the use of WSDL. At the left is a service provider. At the right is a service consumer. The steps involved in providing and consuming a service are:

[XML Web Services - W3Schools](#)

Web services are web application components. Web services can be published, found, and used on the Web. This tutorial introduces WSDL, SOAP, RDF, and RSS. When all major platforms could access the Web using Web browsers, different platforms couldn't interact. For these platforms to work together

[APIs versus web services | MuleSoft Blog](#)

Above image visually describes the difference between an API and a web service. Why is a web API not a web service? In contrast, a typical Web API specifies how software components should interact with each other using the web's protocol (HTTP) as the go-between.

[What is the difference between a web API and a web service?](#)

A web service typically offers a WSDL from which you can create client stubs automatically. Web Services are based on the SOAP protocol. ASP.NET Web API is a newer Microsoft framework which helps you to build REST based interfaces.
