Which way with wetlands in central Uganda? - newvision.co.ug

Wetlands degradation in central Uganda has reached a record high. Many factors are responsible for this but key among them being population explosion and yet land remains fixed. Even worse is the

Wetland - Wikipedia

A wetland is a distinct ecosystem that is inundated by water, either permanently or seasonally, where oxygen-free processes prevail. The primary factor that distinguishes wetlands from other land forms or water bodies is the characteristic vegetation of aquatic plants, adapted to the unique hydric soil.

Regional evapotranspiration from a wetland in Central

...

Regional evapotranspiration (ET) for Fen ki Pond (FP, Kis-Balaton wetland, Hungary) was estimated using weighted canopy areas of five macrophyte classes and open water over an uninterrupted period without any human intervention between 1997 and 2012.

Central European mixed forests - Wikipedia

The Central European mixed forest ecoregion (WWF ID:PA0412) is a temperate hardwood forest covering much of northeastern Europe, from Germany to Russia. The area is only about one-third forested, with pressure from human agriculture leaving the rest in a patchwork of traditional pasture, meadows, wetlands. The ecoregion is in the
